PROFESSIONAL SUMMARY

CompTIA PenTest+ certified cybersecurity professional with 2+ years of experience (including an internship), progressing to Senior Security Analyst in R&D. Hands-on vulnerability assessments across applications, networks, Active Directory and cloud; ransomware investigation, malware analysis and containment; and security engineering for an approximately 400-user environment. Builds realistic vulnerability labs and combines application development, infrastructure operations and security monitoring automation with clear technical reporting.

TECHNICAL SKILLS & TOOLS

Security operations & incident response: Ransomware investigation; malware analysis; root-cause analysis; containment; log/event monitoring; detection rules; incident documentation; vulnerability reporting.

Security testing & research: Web/API/Android VAPT; limited desktop/thick-client testing; network/AD/cloud assessments; source-code review; post-remediation retesting; OWASP Top 10; CVE research.

Offensive assessment tools: Kali Linux, Burp Suite, Nmap, Tenable Nessus, Metasploit, SQLmap, Nuclei, ffuf, Wireshark.

Detection & automation: Splunk, Wazuh, custom detection rules, n8n alert workflows, Python, Bash, PowerShell, webhook integrations (lab monitoring and automation).

Network, identity & perimeter: TCP/IP, DNS, VLANs, managed switches, TP-Link Omada Controller / ER8411, firewalls, access controls, VPNs, Cloudflare DNS/security rules, Authentik MFA, Pritunl.

Cloud, systems & hosting: Linux, Windows Server, Proxmox, Docker, Dell physical servers, VPS hosting, Nginx Proxy Manager; AWS EC2, S3, IAM, CloudTrail, CloudWatch, Lambda.

Development & collaboration: React, Node.js, MongoDB, MySQL, REST APIs, Git/GitHub, CTF authoring, technical reports, mentoring and workshops.

PROFESSIONAL EXPERIENCE

Hackware Security Solutions | Research & Development — **Apr 2024 - Oct 2026**

Senior Security Analyst — May 2026 - Oct 2026
Junior Security Analyst — Jul 2025 - Apr 2026
Junior Cybersecurity Researcher (Intern) — Apr 2024 - Jun 2025

Selected contributions across the three roles

- Conducted client vulnerability assessments and penetration testing on web applications, APIs, networks, internal infrastructure, Active Directory and cloud; documented technical findings and remediation recommendations.
- Performed Android security testing and a limited number of desktop/thick-client assessments; completed several security-focused code reviews and post-remediation retests.
- Participated directly in ransomware investigations, including malware analysis, root-cause analysis and containment, and communicated investigation findings.
- Supported network and server infrastructure serving approximately 400 users; configured VLANs, access controls, firewall policies, wireless access points, captive portals and TP-Link Omada / ER8411 equipment.
- Administered Linux, Windows Server, Dell servers and a three-node Proxmox environment; hosted client VPS/services and migrated websites to VPS without data loss.
- Managed Cloudflare DNS and custom security rules, reverse-proxy/VPN services and selected AWS infrastructure tasks; implemented Authentik/MFA for internal business portals.
- Researched current CVEs and OWASP weaknesses, built approximately 10 realistic vulnerable applications and numerous CTF challenges, and supported their Docker/VM deployment.
- Developed and hosted CRM, attendance and examination portals with React/Node.js and webhook integrations; mentored interns, reviewed technical work and delivered workshops.

SELECTED SECURITY PROJECTS & LAB WORK

Security Monitoring & Alert Automation | Splunk, Wazuh, n8n

Integrated self-developed vulnerable web applications with Splunk and Wazuh; authored detection rules for selected endpoints and configured severity-based n8n workflows that notify Discord. Lab-based detection and security-alert automation with sample attack events.

Realistic Vulnerability Labs & CTF Challenges

Designed application labs modelling e-commerce, banking, university, CRM/HRM and payment workflows using real-world CVE/OWASP weakness themes. Hosted in Docker, VMs and VPS; developed and participated in CTF events.

Security Assessment Tool Prototypes | ScopeForge & WP Scope Workbench

Defined assessment workflows and used AI-assisted development for early-stage web/network and WordPress security tool prototypes with structured reporting. Both remain prototypes in development, with public project showcases.

Network Infrastructure, Proxmox & Cloud Hosting

Supported approximately 400 users and operated Dell-based infrastructure with a three-node Proxmox setup, managed switches, VLANs, wireless access and VPNs. Configured public DNS, Cloudflare security rules, Nginx reverse proxy and client VPS services.

Business Application Development & Identity Controls

Built and hosted CRM, attendance and examination portals with React, Node.js, databases and webhooks; configured Authentik-based authentication and MFA for internal application access.

Authorized Hardware Security Research

Explored Raspberry Pi/Pwnagotchi builds, Flipper Zero and USB/Wi-Fi security research devices in lab settings, including custom captive/portal concepts.

CERTIFICATIONS

CompTIA PenTest+ | CompTIA — Oct 2026

Certified Network Security Practitioner (CNSP) | The SecOps Group — Jan 2025

EDUCATION

Bachelor of Technology (B.Tech), Computer Science and Engineering | Bir Tikendrajit University | 2025
